EDUCATION

Plaksha University

Bachelor of Technology in Computer Science & Artificial Intelligence | CGPA: 8.46/10

Mohali
Aug. 2024 – May 2028

DRV DAV Centenary Public School

Senior Secondary (Class XII)

Phillaur

Aug. 2018 – May 2024

PROJECTS

Veriq – AI Interview Intelligence Platform | [GitHub](#) | [Live Demo](#)

May 2026 – Present

- Built and deployed a **real-time AI interview platform** using **LangGraph**, **FastAPI**, **Next.js**, and **LLM agents**, enabling adaptive questioning, context-aware follow-ups, and **evidence-grounded candidate evaluation**.
- Designed an **LLM-based reasoning engine** for multi-turn claim verification and evidence collection, evaluating candidates across **architecture**, **implementation**, **debugging**, **scalability**, and **system design**.
- Engineered **stateful multi-turn interview orchestration** with context-aware prompt pipelines, interview-stage tracking, and **PostgreSQL-backed persistent session memory**.
- Engineered a **low-latency voice interview pipeline** with speech-to-text, live transcript capture, conversational turn handling, personalized feedback, and real-time interaction across interview sessions.

AgentEval – Failure Diagnosis for LLM Agents | *Python, FastAPI, LangChain, Postgres* June 2026 – Present

- Built **AgentEval**, an **LLM-agent evaluation framework** for diagnosing workflow failures from execution traces using **dependency-aware root-cause analysis** and automated benchmarking.
- Developed a **failure diagnosis system** that combines node-level health signals with upstream/downstream dependency impact to localize failure contributors and generate actionable remediation insights.
- Built an automated **benchmarking pipeline** for agent workflows across failure categories, achieving **73.3% accuracy** and **76.2% balanced accuracy** on a 45-case controlled benchmark.
- Validated AgentEval on the external **Who&When benchmark** through baseline comparisons and **ablation studies**, achieving **40.8% agent-level accuracy** and demonstrating generalization across failure types.

Explainable Retinal Age Gap Prediction | *Python, PyTorch, ViT, XGBoost, SHAP* Feb. 2026 – May 2026

- Developed an **explainable deep learning pipeline** for retinal age prediction using **Vision Transformers (RETFound)**, vascular feature extraction, and XGBoost to estimate biological aging.
- Engineered a preprocessing pipeline for **23K+ retinal images** across BRSET and ODIR-5K, incorporating metadata alignment, quality filtering, **CLAHE enhancement**, and augmentation for training robustness.
- Implemented **vascular biomarker extraction** with Frangi filtering and employed **SHAP** to attribute retinal age predictions to clinically relevant vessel characteristics, improving model interpretability.
- Designed a hybrid pipeline combining **Vision Transformers**, **vascular biomarkers**, and **Explainable AI** to support clinically interpretable **Retinal Age Gap analysis** for early disease-risk assessment.

TECHNICAL SKILLS

Languages: Python, C++, SQL, TypeScript, MATLAB

AI & LLM Systems: Machine Learning, Deep Learning, NLP, LLMs, RAG, Agentic AI, LangChain, LangGraph, Gemini, Hugging Face

Full-Stack & Realtime: FastAPI, Next.js, React, WebSockets, REST APIs, Supabase

Data & Infrastructure: PostgreSQL, MongoDB, Docker, Git, GitHub

ML Frameworks & Tools: PyTorch, Scikit-learn, OpenCV, XGBoost, SHAP, Pandas, NumPy

EXTRACURRICULARS

- Built a **business automation system** streamlining customer support, appointment scheduling, and lead qualification workflows for a small business.
- Managed digital marketing and Instagram presence for multiple local cafes, collaborating directly with business owners to grow online visibility and engagement.
- Designed and pitched an **end-to-end business model** at a 3-day Business Model Pitching Competition, presenting and defending key business decisions before a jury panel.
